SOFTWARE ENGINEER

Cleared full-stack developer with 8+ years of experience designing, developing, maintaining, and supporting enterprise web applications in federal environments. Extensive experience with Java, Spring MVC, JSP, SQL, REST-based integrations, Git, Maven, and automated testing. Hands-on experience supporting applications on Red Hat Linux and AWS GovCloud, automating deployments and configuration through GitLab CI/CD, Jenkins, Ansible, and Bash, and implementing security controls aligned with federal security requirements. Experienced across the full software development lifecycle, including requirements analysis, design, development, testing, deployment, production support, and continuous process improvement.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java, Spring MVC, JavaScript, Angular, jQuery, JSP, HTML/CSS, PHP, C#, VB.NET, Bash
- **Backend / Web:** Microservices, RESTful API development/integration, application configuration, production support
- **Cloud / DevOps:** AWS, EC2, RDS, S3, EFS, Ansible, GitLab CI/CD, Jenkins, Linux/RHEL, Tomcat, JBoss
- **Databases:** SQL, MySQL, PostgreSQL, MS SQL Server
- **Testing / Quality:** JUnit, Mockito, Maven, HPE Fortify Static Code Analyzer
- **Security:** Active Secret Clearance, CompTIA Security+ CE, STIG implementation, FIPS, SELinux, SAML 2.0, MFA/2FA
- **Version Control / Collaboration:** Git, SVN, Agile development, Confluence, Jira

PROFESSIONAL EXPERIENCE

Software Engineer Sr, Coast Guard Online World of Learning (CG-OWL) May 2024-Present

- Support the full software and application lifecycle for enterprise learning platforms hosted within AWS GovCloud, including system configuration, deployment, integration, troubleshooting, production releases, and ongoing maintenance.
- Utilized Git and GitLab for source control, branch management, code integration, and collaborative software development.
- Administer and troubleshoot Java-based enterprise applications running on Red Hat Enterprise Linux (RHEL8) and Tomcat, resolving application, JVM, authentication, database connectivity, and infrastructure issues affecting production availability.
- Develop and maintain automated configuration and deployment processes using Ansible, Jenkins, GitLab CI/CD, Bash to improve deployment consistency and reduce manual configuration.
- Implemented SAML 2.0 single sign-on for a production AWS-hosted application using Ansible-based configuration automation, improving authentication security and standardizing deployment across environments.
- Implemented phone-based multi-factor authentication for a production Moodle environment, strengthening access controls and the application's overall security posture.
- Collaborate with security, infrastructure, development teams to design and implement technical solutions that satisfy operational, security, and customer requirements.
- Perform application and infrastructure troubleshooting across Java/Tomcat, AWS, Linux, and relational database environments to identify root causes and restore production services.

ROBERT RIOS

Ekron, KY 40117 270.312.8838

[linkedin.com/in/robert-rios](https://www.linkedin.com/in/robert-rios)

rrios006@gmail.com

<https://romeotangoromeo.github.io>

- Apply federal security hardening practices through Bash and Ansible automation, including STIG remediation, FIPS configuration, SELinux controls, and secure system configuration.
- Support production releases and system upgrades while maintaining system availability, documenting configuration changes, and coordinating implementation activities across technical teams.
- Created and maintained technical documentation supporting application design, configuration, implementation, and ongoing maintenance with Atlassian suite (Confluence / Jira)

SAIC, Ft Knox, KY

Java Developer, Army Boards Evaluations and Promotions Team Ft Knox, KY Dec 2017– May 2024

- Designed, developed, tested, and maintained enterprise Java web applications using Java, Spring MVC, JSP, HTML, JavaScript, SQL, XML, jQuery, and jqGrid.
- Participated throughout the software development lifecycle, including requirements analysis, technical design, development, testing, deployment, defect resolution, and production support.
- Worked directly with business owners, analysts, developers, and other stakeholders to review functional requirements, identify technical impacts, and develop solutions that met mission requirements.
- Developed server-side application functionality using Spring MVC and Java web technologies, including JSP-based user interfaces and database-backed business logic.
- Developed and maintained SQL queries and stored procedures using parameterized inputs to securely access and manipulate data within enterprise relational databases..
- Created and maintained automated unit tests using JUnit and Mockito to improve application correctness, regression coverage, and maintainability.
- Used HPE Fortify Static Code Analyzer to identify and remediate application security vulnerabilities and support secure coding and federal cybersecurity requirements.
- Used Git and SVN for distributed source control, configuration management, branching, merging, and collaborative application development.
- Used Maven to manage application builds, dependencies, packaging, and deployment artifacts.

FISERV, Bowling Green, KY

Image Conversion Analyst 2013 – June 2017

- Developed, tested, debugged, and documented in-house VB.net applications within Visual Studio 2010 / 2013 / 2015, converting third-party bank imaging solutions to Fiserv Banking platforms.
- Transformed images and indexes to the Federal Reserve's Common Output Format Image Structure (COF v1.4) by developing VB.net application.
- Taught co-worker about binary search trees. Collaborated with colleague to turn this concept into working code which greatly reduced time to perform searches / updates against large dataset
- Increased work efficiencies by assisting in design, querying, optimization, and maintenance of MS SQL Server and Local DB environments.
- Provided post-conversion customer support to ensure full conversion of all products falling under conversion scope.
- Leveraged knowledge of Regex (PCRE), seamlessly transforming large raw datasets.
- Coordinated workflows and managed project timelines by utilizing project management software.

AMERICAN SYNTHETIC RUBBER COMPANY (ASRC), Louisville, KY

IT Intern 2011 – 2013

- Tweaked, optimized, and documented existing business applications, increasing work efficiency for Accounting and Supply Chain.
- Saved \$10K annually with implementation of paperless solution, significantly minimizing man-hours involved in paperwork management.
- Facilitated required OSHA safety training for all plant workers by designing Visual Basic driven Access-based testing environment.
- Automated maintenance and updating of existing Access applications by developing and standardizing methods.
- Migrated Access-based databases to more scalable MySQL and MSSQL environments.

16TH CAVALRY REGIMENT, Ft. Knox, KY

Regimental Information Management Office, Co-op 2008 – 2010

- Provided on-site, phone, and walk-in support for a user base of 750 users experiencing technology issues.
- Oversaw all user training within Windows Vista computer lab environment in accordance with AR 25-2, fulfilling training requirements for connecting to Ft Knox Campus Area Network (FKCAN).
- Developed, tested, and implemented scripts independently for task automation / administration using Visual Basic Scripting
- Automated basic computer Administration / Enumeration tasks using WMI and WIN32.
- Created and stored customized queries within Access 2007 Environment using DAO and ADO.
- Documented usage procedures (README) for properly using scripts for designated purposes.

PROJECTS

Angular Portfolio SPA

<https://romeotangoromeo.github.io>

- Built and deployed an Angular SPA using reusable components, data binding, interpolation, structural directives, event handling, and @HostListener.
- Implemented responsive component styling and interactive UI behavior while gaining hands-on experience with Angular component lifecycle and template syntax.
- Automated production deployment to GitHub Pages using GitHub Actions.

EDUCATION

Bachelor of Science (BS), Computer Engineering and Computer Science, J.B. Speed School of Engineering, University of Louisville, Louisville, KY
