Software Engineer

Cleared full-stack developer with 8+ years of experience designing, developing, maintaining, and supporting enterprise web applications in federal environments. Extensive experience with Java, Spring MVC, JSP, SQL, REST-based integrations, Git, Maven, and automated testing. Hands-on experience supporting applications on Red Hat Linux and AWS GovCloud, automating deployments and configuration through GitLab CI/CD, Jenkins, Ansible, and Bash, and implementing security controls aligned with federal security requirements. Experienced across the full software development lifecycle, including requirements analysis, design, development, testing, deployment, production support, and continuous process improvement.

Technical Skills

- **Languages & Frameworks:** Java, Spring MVC, JavaScript, Angular, jQuery, JSP, HTML/CSS, PHP, C#, VB.NET, Bash
- **Backend / Web:** Microservices, RESTful API development/integration, application configuration, production support
- **Cloud / DevOps:** AWS GovCloud, EC2, RDS, S3, EFS, Ansible, GitLab CI/CD, Jenkins, Linux/RHEL, Tomcat, JBoss
- **Databases:** SQL, MySQL, PostgreSQL, MS SQL Server
- **Testing / Quality:** JUnit, Mockito, Maven, HPE Fortify Static Code Analyzer
- **Security:** Active Secret Clearance, CompTIA Security+ CE, STIG implementation, FIPS, SELinux, SAML 2.0, MFA/2FA
- **Version Control / Collaboration:** Git, SVN, Agile development, Confluence, Jira

Professional Experience

SAIC, Remote
Software Engineer Sr, Coast Guard Online World of Learning (CG-OWL) May 2024-July 2026

- Supported the full application lifecycle for enterprise learning platforms hosted in AWS GovCloud, including configuration, deployment, integration, production releases, troubleshooting, and maintenance.
- Administered and troubleshot Java-based applications running on RHEL and Tomcat, resolving JVM, authentication, database connectivity, and infrastructure issues affecting production availability.
- Developed automated configuration and deployment processes using Ansible, Jenkins, GitLab CI/CD, and Bash, improving deployment consistency and reducing manual configuration.
- Implemented SAML 2.0 SSO and phone-based MFA for production applications, strengthening authentication and access controls across federal environments.
- Applied federal security hardening through Bash and Ansible automation, including STIG remediation, FIPS configuration, SELinux controls, and secure system configuration.
- Collaborated with development, infrastructure, and security teams to design and implement technical solutions that satisfy operational, security, and customer requirements.
- Created and maintained technical documentation for application configuration, implementation, and support using Confluence and Jira.

SAIC, Ft Knox, KY

Java Developer, Army Boards Evaluations and Promotions Team Ft Knox, KY Dec 2017– May 2024

- Designed, developed, tested, and maintained enterprise web applications using Java, Spring MVC, JSP, HTML/CSS, JavaScript, jQuery, SQL, XML, and REST-based integrations.
- Participated across the full SDLC, translating functional requirements into technical designs, application functionality, database-backed business logic, testing, deployments, and production support.
- Developed server-side Java/Spring MVC functionality and JSP-based user interfaces supporting Army personnel business processes.
- Developed SQL queries and stored procedures using parameterized inputs to securely access and manipulate enterprise relational data.
- Created automated unit tests using JUnit and Mockito and managed builds, dependencies, and application packaging with Maven.
- Used Git/SVN for collaborative development and HPE Fortify Static Code Analyzer to identify and remediate application security vulnerabilities.

FISERV, Bowling Green, KY

Image Conversion Analyst Nov 2013 – June 2017

- Developed, tested, debugged, and documented in-house VB.net applications within Visual Studio 2010 / 2013 / 2015, converting third-party bank imaging solutions to Fiserv Banking platforms.
- Transformed images and indexes to the Federal Reserve's Common Output Format Image Structure (COF v1.4) by developing VB.net application.
- Taught co-worker about binary search trees. Collaborated with colleague to turn this concept into working code which greatly reduced time to perform searches / updates against large dataset
- Increased work efficiencies by assisting in design, querying, optimization, and maintenance of MS SQL Server and Local DB environments.
- Provided post-conversion customer support to ensure full conversion of all products falling under conversion scope.
- Leveraged knowledge of Regex (PCRE), seamlessly transforming large raw datasets.
- Coordinated workflows and managed project timelines by utilizing project management software.

Projects

Angular Portfolio SPA

https://romeotangoromeo.github.io

- Built and deployed an Angular SPA using reusable components, data binding, interpolation, structural directives, event handling, and @HostListener.
- Implemented responsive component styling and interactive UI behavior while gaining hands-on experience with Angular component lifecycle and template syntax.
- Automated production deployment to GitHub Pages using GitHub Actions.

Education

Bachelor of Science (BS), Computer Engineering and Computer Science, J.B. Speed School of Engineering, University of Louisville, Louisville, KY
